

## Check out the great things clients have been saying about Training from Pro Consulting Specialists.

---

### **Schlumberger** **Training Evaluation Forms**

Strengths: Training material is very good. Tailored to our needs. Self paced and geared toward the needs of SLB. All materials and models on-line for our future reference. The instructor was extremely knowledgeable and helpful. The trainer has put forward extra effort to answer questions posted.

### **Large truck company in Washington State** **Steve Snyder, Senior CAE Engineer**

"Outstanding work...Your class presentation captured the attendees attention effectively and efficiently conveyed the differences between software versions. Further, your impressive "off the cuff" class, developed on extremely short notice, covering electrical detailing and routing proved very valuable for our electrical group. I feel we received great value for our training bucks spent and recommend your services without hesitation."

### **Polaris Industries/victory motorcycles** **Mark Bader, Motorcycle Design Manager**

"PCS trained and implemented Pro/PROCESS. They showed our guys how to use the module and set up all the instances for us. They worked full time for 6 months and did a great job. I would recommend PCS to anyone."

### **Medtronic - Promeon** **Steve May, Engineering Analysis Manager**

"I was completely satisfied with the Instructor, course set up, course content, and price!" "Non-essential material was not-included - just the right information in the right order."

### **United Defense** **Rosanna Chambliss, IR Training Manager (612) 572-7456**

"Thanks" again for your help and for the great job you did. We'll definitely consider you as an option for training if we have future needs of this type.
